

A wide-angle photograph of a renewable energy farm. In the foreground, rows of blue solar panels are laid out on a green field. In the background, several large white wind turbines stand on rolling green hills under a clear blue sky with a few wispy clouds.

**CIC supports JP Energie Environnement (JPee), a leading French independent producer of renewable electricity, in the refinancing of a significant portion of its asset portfolio**

Acting as MLA, lender and hedging bank, CIC contributed to the structuring of a c.€430m long-term financing.

The refinancing covers 19 wind farms (including one under construction) and 25 solar power plants, with a total capacity of 427 MW, representing nearly 70% of JPee's total installed capacity.

This transaction fully aligns with Crédit Mutuel Alliance Fédérale's strategy notably focused on decarbonization and French territories' support.

### **About JP Energie Environnement**

#### *Leading independent French renewable energy producer*

Founded in 2004, JP Energie Environnement (JPee) develops, finances, builds, operates, and maintains wind farms and photovoltaic plants across France. The company also constructs solar plants for third parties for self-consumption and is advancing battery storage projects.

As of November 2025, JPee operates 622 MW of installed capacity (18 wind farms and 70 solar plants), with 288 MW under construction or ready to build and a development pipeline exceeding 2.5 GW. A mission-driven company since 2024, JPee's purpose is enshrined in its bylaws:

“Act collectively for a desirable future by transforming the energy model at the heart of our regions.”

Projected 2025 figures:

- Revenue: €82 million (electricity sales)
- Production: 880,000 MWh – equivalent to the annual consumption of 400,000 people
